This invention describes a nover numerized anti-ras antibouy-tiake molecule (I) that, induces apoptosis in cells with an abnormal Fas/Fas ignand system, by bindibiting binding between the apoptosis in cells with a normal system, by inhibiting binding between Fas and its ligand. The products of the invention have anti-inflammatory, anti-anemic, antidiabetic, anti-allergic, anti-arthritic, antiviral, antiarteriosclerotic, cardiant and hepatropic activity. (I) induce antiarteriosclerotic, cardiant and hepatropic activity. (I) induce apoptosis by binding to cell surface Fas or inhibit in by competitive inhibition of ligand binding. (I) are used to treat and/or prevent diseases associated with the Fas/Fas ligand system, especially systemic versus host disease, Sjorgen's Syndrome, pernicious or hypoplastic anemia, Addison's disease, scleroderma, Goodpasture syndrome, Crohn's disease, autoimmune hemolytic anemia, sterility, myasthenia gravis, multiple sclerosis, Basedow's disease, thrombopenia purpura, insulin dependent diabetes mellitus, allergy, arteriosclerosis, myocarditis, cardiomyopathy, glomerulonephritis, hepatitis (fulminant, chronic, viral (B, Cor D) or alcoholic), and transplant rejection. (I) selectively induce it in abormal cells but selectively induce it in abormal cells the but selectively induce it in abormal cells unine antiamine active site of Fas, ie. they minic the native ligand, do not induce liyer disease, and have reduced risk of inducing a human anti-murine antibody response. This sequence represents a humanised anti-marine antibody response. This sequence represents the method in the inventione of light chain which is used in the chairs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           QQKPGKAPKLLIYAASNLESGIPSRFSGSGSGTDFTLTISSLQPEDFATYYCQQSNEDPR 120

Sequence 15, Application US/08887352B
Patent No. 5994511
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Henry B. Lowman, Leonard G. Presta, Paula M. Jardieu, John Lowe
TITLE OF INVENTION: Improved Anti-IgE Antibodies and Method of
TITLE OF INVENTION: Improving Polypeptides
NUMBER OF SEQUENCES: 26
CORRESPONDENCE ADDRESS:
                                         81 GIPSRFSGSGSGTDFTLTISSLQPEDFATYYCQQSNEDPRTFGQGTKVEIKRTVAAPSVF 140

If Xappa chain V region (Mabl3-1) - mouse (fragment)
NyAlternate names: immunoglobulin light chain
C;Species: Mus musculus (house mouse)
C;Date: 24-Aug-1996 #sequence_revision 13-Mar-1997 #text_change 20-Jun-2000
C;Date: 24-Aug-1996 #sequence_revision 13-Mar-1997 #text_change 20-Jun-2000
C;Accession: S68241; S68244
R;Takagi, M.; Kohda, K.; Hamuro, T.; Harada, A.; Yamaguchi, H.; Kamachi, M.; Imanaka, submitted to the BMBL Data Library, March 1994
A;Description: Specific peroxidase activity by formation of an antibody L-chain-porpha, A;Reference number: S68241
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            A; Title: Thermostable peroxidase activity with a recombinant antibody L chain-porphy-A; Reference number: $68211; MUID: 96085223
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  A, Modecule type: mRNA

                                                                                                                                                                                                                                                                                                                                                                         This is the amino acid sequence of the VD type humanised heavy chain variable region of murine anti-human Fas monoclonal antibody HFETA. It was utilised in a claimed humanised HFETA heavy chain (see AAV70079). The invention provides methods for producing humanised antibodies by culturing host cells. Humanised versions of HFETA (see AAW83031-37) are capable of inducing apoptosis in abnormal cells expressing Fas, and of inhibiting Fas-induced apoptosis in normal cells. Humanised antibodies are used to evaluate, in animal models, treatments of diseases that involve Fas/Fas ligand interactions, and also to treat such diseases, including autoimmune disease (e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                systemic lupus erythematosus, Hashimoto's disease, graft versus host disease, Slogren syndrome, pernicious anaemia, Addison's disease, scleroderma, Goodpasture syndrome, Crohn's alsease, rheumatoid arthritis, autoimmune haemolytic anaemia, sterility, myasthenia gravis, multiple sclerosis, Basedow's disease, thrombopenia purpura and insulin-dependent diabetes), allergies, atopy, arteriosclerosis, myocarditis, cardiomyopathy, glomecular nephritis, hypoplastic anaemia, hepatitis, AIDS and transplant rejection (all olaimed).

The invention relates to compositions for the prevention or treatment or diseases caused by an abnormality in the FaS/FaS ilgand system containing an anti-FaS antibody as the active component. The anti-FaS antibody is either the murine anti-human FaS monoclonal antibody HFETA, or a humanised version of HFETA containing identical CDRS (complementarity determining regions) to antibody HFETA. Via its interaction with FaS, the antibody of the invention acts as a modulator of apoptosis. The compositions of the invention may therefore be used in the treatment or prevention of conditions such as autoimmune diseases, allergy, atopy, arteriosclerois, myocarditis, cardiomyopathy, glomerulonephritis, aplastic anaemia (panmyelophthisis), hepatitis, AIDS represent the heavy chains (or fragments thereof) of various humanised HFETA-derived anti-Fas antibodies.
                                                                Anti-Fas antibody; monoclonal antibody HFE7A; FERM-BP-5828; murine; humanised antibody; complementarity determining region; CDR; human Fas; Fas ligand; apoptosis modulator; programmed cell death; autoinmune disease; allergy; atopy; arteriosclerosis; myocarditis; cardiomyopathy; glomerulonephritis; aplastic anaemia; panmyelophthisis; hepatitis; AIDS; graft rejection; heavy chain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Preventive or treating agent for the diseases caused by an abnormality in the Fas/Fas ligand system e.g. autoimmune diseases, contains anti-Fas antibody ^{\prime}

This invention describes a novel humanized anti-Fas antibody-like

molecule (I) that, induces apoptosis in cells with an abnormal Fas/Fas

ligand system, by binding to Fas on the cell surface, and prevents

c apoptosis in cells with a normal system, by inhibiting binding between

apoptosis in cells with a normal system, by inhibiting binding between

c apoptosis in cells with a normal system, by inhibiting binding between

c anti-anemic, antidiabetic, anti-allergic, anti-arthritic, antiviral,

immunomodulatory, dermatological, immunosuppressive, thyromimetic,

antirheumatic, nephrotropic, antinfertility, neuroprotective,

c limbition of ligand binding. (I) are used to treat and/or prevent

c diseases associated with the Fas/Fas ligand system, especially systemic

c lupus erythematosus, Hashimoto disease, pernicious or hypoplastic

c versus host disease, Sjorgen's syndrome, pernicious or hypoplastic

c anemia, Addison's disease, scleroderma, Goodpasture syndrome, Crohn's

c disease, autoimmune hemolytic anemia, sterility, myasthenia gravis,

c anemia, Addison's Basedow's disease, thrombopenia purpura, insulin

c dependent diabetes mellitus, allergy, arteriosclerosis, myccarditis,

c ardiomyopathy, glomerulonephritis, hepatitis (fulminant, chronic, viral

c inhibit apoptosis in normal cells but selectively induce it in abnormal

c inhibit apoptosis in normal cells but selectively enteriors or allergy and transplant rejection. (I) salectively

They bind to both human and murine Fas, so can be evaluated in murine disease models. (I) act on the active site of Fas, i.e. they mimic the native ligand, do not induce liver disease, and have reduced risk of inducing a human anti-murine antibody response. This sequence represents a humanised anti-Fas antibody HERTA heavy chain which is used in the method described in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New humanized anti-Fas antibody, useful for treating or preventing e.g. inflammatory or autoimmune disease, induces apoptosis selectively in
  antibody; human; anti-inflammatory; anti-anemic; antidiabetic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Tamaki I, Takahashi T;

                                                                                                                                                                                                                                                                                                                                                                                      qq
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                             This is the amino acid of the heavy chain of murine anti-human Fas monoclonal antibody HFE7A. CDNA (see AAV70129) encoding the heavy chain was obtained from HFE7A-secreting hybridoma (FEMA BP-58A8).

RNA by RT-PCR (see AAV70125-26). The invention provides humanised artibodies are capable of inducing apoptosis in abnormal cells. HFE7A antibodies are capable of inducing apoptosis in abnormal cells. expressing Fas, and of inhibiting Fas-induced apoptosis in normal cells. They are used to evaluate, in animal models, treatments of diseases that involve Fas/Fas ligand interactions, and also to treat such diseases, including autoimmune disease (e.g. systemic lupus crythematosus, Hashimoto's diseases (e.g. systemic lupus crythematosus, Hashimoto's disease, graft versus host disease, solecoderma, Goodpasture syndrome, Crohn's disease, rheumatoid arthritis, autoimmune haemolytic anaemia, sterility, myasthenia and insulin-dependent diabetes), allergies, atopy, arteriosclerosis, myocarditis, cardiomyopathy, glomerular nephritis, hypoplastic anaemia, hepatitis, AIDS and transplant rejection (all claimed).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Fas ligand; apoptosis modulator; programmed cell death; autoimmune disease; allergy; atopy; arteriosclerosis; myocarditis; cardiomyopathy; glomerulonephritis; aplastic anaemia; panmyelophthisis; hepatitis; AIDS; graft rejection; heavy chain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Preventive or treating agent for the diseases caused by an abnormality in the Fas/Fas ligand system e.g. autoimmune diseases, contains anti-Fas antibody

                                                              The invention relates to compositions for the prevention or treatment or diseases caused by an abnormality in the Fas/Fas ligand system containing an anti-Fas antibody as the active component. The anti-Fas antibody is either the murine anti-human Fas monoclonal antibody HFETA, or a humanised version of HFETA containing identical CDRs (complementarity determining regions) to antibody HFETA. Via its interaction with Fas, the antibody of the invention acts as a modulator of apoptosis. The compositions of the invention may therefore be used in the treatment or prevention of conditions such as autoimmune diseases, allery, atopy, arterfosels, myocarditis, cardiomyopathy, glomerulonephritis, aplastic anaemia (panmyelophthisis), hepatitis, AIDS heavy chain of the murine anti-human Fas monoclonal antibody HFETA, which is produced by hybridoma HFETA (FERM-BP-5828).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Goodpasture syndrome; Crohn's disease; sterility; myasthenia gravis; multiple sclerosis; Basedow's disease; thrombopenia purpura; allergy; insulin dependent diabetes mellitus; arteriosclerosis; myocarditis; cardiomyopathy; glomerulonephritis; hepatitis; transplant rejection.

This invention describes a novel humanized anti-Fas antibody-like
molecule (1) that, induces apoptosis in cells with an abnormal Fas/Fas
ligand system, by binding to Fas on the cell surface, and prevents
capoptosis in cells with a normal system, by inhibiting binding between
capoptosis in cells with a normal system, by inhibiting binding between
capoptosis in cells with a normal system, by inhibiting binding between
cantianemic, antidiabetic, anti-allergic, anti-arthritic, antiviral,
immunomodulatory, dermatological, immunosupressive, thyromimetic,
antirheumatic, nephrotropic, antiinfertility, neuroprotective,
cantiartriosclerofic, cardiant and hepatropic activity. (I) induce
apoptosis by binding to cell surface Fas or inhibit it by competitive
capoptosis by binding to cell surface Fas or inhibit it by competitive
capoptosis by binding to cell surface Fas or inhibit it by competitive
capoptosis by binding to cell surface Fas or inhibit it by competitive
capoptosis by binding to cell surface Fas or inhibit it by competitive
capoptosis by binding to cell surface Fas or inhibit in by competition
canenia, Addison's disease, sloracderma, Goodpasture syndrome, Crohn's
clievase, autoinmune hemolytic anemia, sterility, myasthenia gravis,
canemia, Addison's disease, thrombopenia purpura, insulin
dependent diabetes mellitus, allergy, arteriosclerosis, myocarditis,
cardiomyopathy, glomerulonephritis, hepatitis (fulminant, chronic, viral
(B, C or D) or alcoholic), and transplant rejectively induce it in abnormal
cells. They bind to both human and murine Fas, so can be evaluated in
culting a human anti-murine antibody response. This sequence represents
a murine disease models. (I) act on the active site of Fas, i.e. they minc
che native ligand, do not induce liver disease, and have reduced risk of
inducing a human anti-murine antibody response. This sequence represents
capacity in a normal cells but segonse. This sequence represents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                    New humanized anti-Fas antibody, useful for treating or preventing e.g. inflammatory or autoimmune disease, induces apoptosis selectively in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            0; Gaps

chain of murine anti-human Fass monoclonal antibody HFE7A. E. coll pgHSL7A62 SANK 73397 harbors plasmid pgHSL7A62 carrying a fusion of fragment of the humanised vor tregion (see AAV70079), and is deposited as FERM BP-6074 (claimed). The invention provides methods for producing humanised antibodies by culturing host cells. Humanised creations of HFF7A (see AAW83031-37), like native HFE7A, are capable of inducing apoptosis in abnormal cells expressing Fas, and of inhibiting Fas-induced apoptosis in normal cells. The humanised antibodies are used to evaluate, in animal models, treatments of diseases that involve Fas/Fas ligand interactions, and also to treat such diseases, including autoimmune disease (e.g. systemic lupus erythematosus, Hashimoto's disease, graft versus host disease,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sjögren syndrome, pernicious anaemia, Addison's disease, scleroderma Goodpasture syndrome, Crohn's disease, rhemmatoid arthritis, autoimmune haemolytic anaemia, sterility, myasthenia gravis, multiple sclerosis, Basedow's disease, thrombopenia purpura and

                                                                                                                                                                                                                                                                                           This is the amino acid sequence of the HV type humanised heavy

chain of murine anti-human Fas monoclonal antibody HFE7A. It
includes humanishing R44G and A7GT anino acid substitutions that are
are conserved in the human Egg heavy chain. Host Escherichia coli
geHPDHV3 SANK 70298 harbors plasmid pgHPDHV3 carrying a fusion
fragment of the humanised HV type HFB7A heavy chain and DNA
encoding human 1gG1 constant region (see AAV70080), and is deposited
as FERW BP-6273 (claimed). The invention provides methods for
producing humanised antibodies by culturing host cells. Humanised
versions of HFB7A (see AAM83031-37), like native HFB7A, are capable
of inducing apoptosis in abnormal cells. The humanised
inhibiting Fas-induced apoptosis in normal cells. The humanised
antibodies are used to evaluate, in animal models, treatments of
diseases that involve FasyFas ligand interactions, and also to
treat such diseases, including autoimmune disease, scleroderma,
Goodpasture syndrome, pernicious anaemia, Addison's disease, scleroderma,
Goodpasture syndrome, Crohn's disease, thrombopenia purpura and
insulin-dependent diabetes), allergies, atopy, arteriosclerosis,
multiple scl rosis, Bassedow's disease, thrombopenia purpura and
insulin-dependent diabetes), allergies, atopy, arteriosclerosis,
myocarditis, cardiomyopathy, glomerular nephritis, hypoplastic
anaemia, hepatitis, AIDS and transplant rejection (all claimed).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       murine; humanised antibody; complementarity determining region; CDR; human Fas; Fas ligand; apoptosis modulator; programmed cell death; autoimmune disease; allergy; atopy; arteriosclerosis; myocarditis; cardiomyopathy; glomerulonephritis; aplastic anaemia; panmyelophthisis; hepatitis; AIDS; graft rejection; heavy chain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1 SYWMQXXXXXXXXXXXXXXX EIDPSDSYTNYNQKFKGXXXXXXXXXXXXXXXXXXXX 60
New antibodies and proteins bind conserved epitope of Fas antigen - used to evaluate drugs in animal models and to treat Fas-associated diseases e.g. autoimmune disease, allergy, atopy, arteriosclerosis, myocarditis, hepatitis and AIDS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                               g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to compositions for the prevention or treatment or diseases caused by an abnormality in the Fas/Fas ligand system containing an anti-Fas antibody as the active component. The anti-Fas antibody is either the murine anti-human Fas monoclonal antibody HFFTA. Or a humanised version of HFETA containing identical CDRs (complementarity determining regions) to antibody HFFTA. Via its interaction with Fas, the antibody of the invention acts as a modulator of apoptosis. The compositions of the invention may therefore be used in the areatment or prevention of conditions such as autoimmune diseases, allergy, arteriosclerosis, myocarditis, cardiomyopathy, glomerulonephritis, aplastic anaemia (panmyelophthisis), hepatitis, AIDS and organ graft rejection. Sequences AAB14775-B14776 and AAB14779 represent the heavy chains (or fragments thereof) of various humanised HFETA-derived anti-Fas antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Anti-Fas antibody; monoclonal antibody HFB7A; FERM-BP-5828; murine; humanised antibody; complementarity determining region; CDR; human Fas; Fas ligand; apoptosis modulator; programmed cell death; autoimmune disease; allergy; atopy; arteriosclerosis; myocarditis; cardiomyopathy; glomerulonephritis; aplastic anaemia; panmyelophthisis; hepatitis; AIDS; graft rejection; heavy chain.

                                                                                                                                                                                                                                                                                                                                       The invention relates to compositions for the prevention or treatment or diseases caused by an abnormality in the Fas/Fas ligand system containing an anti-Fas antibody as the active component. The anti-Fas antibody is either the murine anti-human Fas monoclonal antibody HFETA, or a humanised version of HFETA containing identical CDRs (complementarity determining regions) to antibody HFETA. Via its interaction with Fas, the antibody of the invention acts as a modulator of apoptosis. The compositions of the invention may therefore be used in the treatment or prevention of conditions such as autoimmune diseases, allergy, atopy, arteriosclerosis, myocarditis, cardiomyopathy, glomerulonephritis, aplastic anaemia (panmyelophthisis), hepatitis, AIDS represent the heavy chains (or fragments thereof) of various humanised HFETA-derived anti-Fas antibodies.
                                                                                                                   Preventive or treating agent for the diseases caused by an abnormality in the Fas/Fas ligand system e.g. autoimmune diseases, contains anti-Fas antibody
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ó
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             100.0%; Score 246; DB 21; Length 470; 42.5%; Pred.                                                                                                                                                                                                                                                                                                                                            This invention describes a novel numnized anti-ras antibody-like molecule (I) that, induces apoptosis in cells with an abnormal Fas/Fas indecule (I) that, induces apoptosis in cells with an abnormal Fas/Fas indecule (I) that, induces apoptosis in cells with a normal system, by inhibiting binding between Fas and its ligand. The products of the invention have anti-inflammatory, anti-antidiabetic, anti-allergic, anti-arthritic, antiviral, immunosuppressive, thyronimetic, antidiabetic, antidiffertility, neuroprotective, antiarteriosclerotic, cardiant and hepatropic activity. (I) induce apoptosis by binding to cell surface Fas or inhibit the by competitive inhibition of ligand binding. (I) are used to treat and/or prevent inhibition of ligand binding. (I) are used to treat and/or prevent inhibition of ligand binding. (I) are used to treat and/or prevent inhibition of ligand binding. (I) are used to treat and/or prevent of inhibit expensively system, system, especially systemic lupus expthematosus, Hashimoto disease, rheumatoid arthritis, graft versus host disease, Sjorgen's syndrome, pernicious or hypoplastic anemia, Addison's disease, scleroderma, Goodpasture syndrome, Crohn's disease, autoinmune hemolytic anemia, sterility, mysathenia gravis, anitiple sclerosis, Basedow's disease, thrombopenia purpura, insulin dependent diabetes mellitus, allergy, arteriosclerosis, myocarditis, cardiomyopathy, glomerulonephitis, hepatitis (fulminant, chronic, viral (B), C or D) or alcoholic), and transplant rejection. (I) selectively inhibit apoptosis in normal cells but selectively induce it in abnormal cells. They bind to both human and murine Fas, so can be evaluated in murine disease models. (I) act on the active site of Fas, i.e. they minic multiple a humanised anti-marine antibody HREAA designed heavy chain which is used in the method described in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Fas; antibody; human; anti-inflammatory; anti-anemic; antidiabetic; anti-allergic; anti-arthritic; antiviral; immunomodulatory; cardiant; dermatological; immunosuppressive; thyromimetic; antirheumatic; anti-Fas; nephrotropic; antiinfertility; neuroprotective; antiarteriosclerotic;
                                                                                                                                                                                              New humanized anti-Fas antibody, useful for treating or preventing e.g. inflammatory or autoimmune disease, induces apoptosis selectively in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This invention describes a novel humanized anti-Fas antibody-like
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

This invention describes a novel humanized anti-Fas antibody-like molecule (I) that, induces apoptosis in cells with an abnormal Fas/Fas ligand system, by binding to Fas on the cell surface, and prevents apptosis in cells with a normal system, by inhibiting binding between the apoptosis in cells with a normal system, by inhibiting binding between the products of the invention have anti-inflammatory, anti-anemic, antidiabetic, anti-allergic, anti-arthritic, antiviral, anti-anemic, nephrotropic, antimosuppressive, thyromimetic, antirheumatic, nephrotropic, antimosuppressive, thyromimetic, antiarteriosclerotic, cardiant and hepatropic activity. (I) induce antiarteriosclerotic, cardiant and hepatropic activity. (I) induce cappoptosis by binding to cell surface Fas or inhibit it by competitive contains associated with the Fas/Fas ligand system, especially systemic diseases associated with the Fas/Fas ligand system, especially systemic cupus erythematosus, Hashimoto disease, rheumatoid arthritis, graft or unuliple solerosis, Bashimoto disease, thrombopenia purpura, insulin dependent diabetes mellitus, allergy, arteriosclerosis, myocarditis, cardiomyopathy, glomerulonephritis, hepatitis (fulminant, chronic, viral cells. They bind to both human and murine Fas, so can be evaluated in murine disease models. (I) act on the active site of Fas, i.e. they mimic the native ligand, do not induce liver disease, and have reduced risk of inducing a human anti-murine antibody response. This sequence represents a humanised anti-Fas antibody HEF7A designed heavy chain which is used in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                treating or preventing e.g. apoptosis selectively in

This introduced apoptosis in cells with an abnormal Fas/Fas molecule (I) that, induces apoptosis in cells with an abnormal Fas/Fas ligand system, by indibiting binding between the apoptosis in cells with an abnormal system, by inhibiting binding between Fas and its ligand. The products of the invention have anti-inflammatory, anti-amemic, antidiabetic, anti-allergic, anti-arthritic, antiviral, antidiabetic, antidiabetic, antinfertility, enventorior antidiabetic, antidiabetic, antidiabetic, antidiateriors products of immunoaculatory dermatological, immunosuppressive, thyromimetic, antidiateriorsclerotic, cardiant and hepatropic activity. (I) induce antiarteriosclerotic, cardiant and hepatropic activity. (I) induce apoptosis by binding to cell surface Fas or inhibit it by competitive inhibition of ligand binding. (I) are used to treat and/or prevent diseases associated with the Fas/Fas ligand system, especially systemic diseases associated with the Fas/Fas ligand system, especially systemic compania, bost disease, soleroderma, Goodpasture syndrome, Crohn's disease, solorgen's syndrome, pernicious or hypoplastic anemia, Addison's disease, scleroderma, Goodpasture syndrome, Crohn's disease, autoimmune hemolytic anemia, sterility, myasthenia gravis, multiple sclerosis, Basedow's disease, thrombopenia purpura, insulin dependent diabetes mellitus, allergy, arteriosclerosis, myocarditis, cardiomyopathy, glomerulonephritis, hepatitis (fulminat, chronic, viral (B, C or D) or alcoholic), and transplant rejection. (I) selectively indiat apoptosis in normal cells but selectively induce it in abnormal cells. They bind to both human and murine Fas, so can be evaluated in murine disease models. (I) act on the active site of Fas, i.e. they mimic the native ligand, do not induce liver disease, and have reduced risk of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Fas; antibody; human; anti-inflammatory; anti-anemic; antidiabetic; anti-allergic; anti-arthritic; antiviral; immunowodulatory; cardiant; dermatological; immunosuppressive; thyrominetic; antirhematic; anti-Fas; nephrotropic; antilnfertility; neuroprotective; antifarteriosclerotic; hepatotropic; antilnfertility; neuroprotective; antiarteriosclerotic; hepatotropic; humanized; apoptosis; systemic lupus erythematosus; Hashimoto disease; rheumatoid arthritis; graft versus host disease; Sjorgen's syndrome; anemia, Addison's disease; scleroderma; sterility; Goodpasture syndrome; Crohn's disease; sterility; myasthenia gravis; multiple sclerosis; basedow's disease; thrombopenia purpura; allergy; cardiomyopathy; glomerulonephritis; hepatitis; transplant rejection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New humanized anti-Fas antibody, useful for treating or preventing e.g. inflammatory or autoimmune disease, induces apoptosis selectively in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This invention describes a novel humanized anti-Fas antibody-like
